1000 ppb = 1 mg/l PO₄

- 1 + 2** Add tablet reagents to empty vial.
- 3** Fill vial completely with sample.
- 4** Crush tablets by twisting the stirring rod. Spill over of a bit sample while immersing the rod is normal and leads to a defined volume in the vial.
- 5** Sway vial until tablets are completely dissolved.
- 6 + 7** After 5 minutes compare colour with colour card and get result.
- 8** Rinse vial and stopper with drinking water.
